

Medicines supply notices

Updated September 30, 2021

On this page, the Danish Medicines Agency publishes current and future supply difficulties for medicines. The page provides an overview of which products can not be delivered from the company, as well as the expected period and the reason for the supply difficulties. Difficulty supplying medicines can be due to many factors, e.g. problems with production or quality.

We publish regularly and the announcements only deal with supply difficulties for medicines, which are expected to affect the treatment of patients in Denmark. These are supply difficulties for medicines that at some point are not expected to be available in other pack sizes or as directly substitutable, alternative medicines.

The Danish Medicines Agency receives information about supply difficulties and the duration of the supply period from the company that has a marketing authorization for the medicine, but the patient will not necessarily experience the shortage of the medicine throughout the period because wholesalers 'and pharmacies' stocks have not been taken into account.

The messages are not updated regularly. Questions about the current status should be directed to the company.
